

OCS Inventory

Trend Micro : Registry Requests

Introduction

In order to complete the inventory made in a company, i needed two informations about the antivirus Trend Micro :

- The virus pattern version
- The virus pattern date

Some posts in the OCS forums, let me think about the registry requests.

Registry Requests

Many values, related to Trend Micro, are available in the registry. But, for my needs, I just wanted to know about the two previous informations :

- *HKLM\SOFTWARE\TrendMicro\PC-cillinNTCorp\CurrentVersion\Misc. InternalPatternVer*
- *HKLM\SOFTWARE\TrendMicro\PC-cillinNTCorp\CurrentVersion\Misc. PatternDate*

Let setup the registry requests in OCS :

regkey	regvalue
SOFTWARE\TrendMicro\PC-cillinNTCorp\CurrentVersion\Misc.	InternalPatternVer
SOFTWARE\TrendMicro\PC-cillinNTCorp\CurrentVersion\Misc.	PatternDate

The registry values are correctly retrieved during the inventory :

REGISTRE

Nom de la clé	Valeur de la clé
TREND VERSION SIGNATURE	618900
TREND DATE SIGNATURE	20090611

Conclusion

Besides these two values, useful for my needs, you can retrieve much more information with other values.

Remember that I worked only with the business version of Trend Micro : Trend Micro SMB.

Later, i will test the different versions of Trend Micro in order to update this documentation :

- **Verified : Trend Micro SMB 2.x : « PatternDate » registry key doesn't exist !**
- **Verified : Trend Micro SMB 3.x : OK !**
- Worry-Free Business Security 5.x / 6.x
- Trend Micro PC-Cillin / Internet Security
